a. Abrasion resistance: based on the number of cycles required to rub through the sample glove.
b. Cut resistance: based on the number of cycles required to cut through the sample at a constant speed with a rotating blade.
c. Tear resistance: based on the amount of force required to tear the sample.
d. Puncture resistance: based on the amount of force required to pierce the sample with a standard sized point.
e. Cut resistance according TDM100 test based on the number of cycles required to cut through the sample at a constant speed with a sliding blade.

**Double layer coating**

These gloves have two layers of coating: the first layer offers superior protection, while the second provides excellent grip, even in wet or humid conditions.

**Water repellent**

Keeps your hands dry by repelling water and moisture.
